EXAMINER'S AMENDMENT

The Group and/or Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 1637.

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Richard F. Trecartin on 5/15/2002.

2. The application has been amended as follows:

In claim 12, line 6, ~~delete~~ "said multiple loci" and substitute therefore -- said three or more loci -- and in step c), line 3 ~~delete~~ "said multiple loci" and substitute therefore -- said three or more loci --.

3. The following is an examiner's statement of reasons for allowance:

No prior art has been found teaching or suggesting a method for analyzing a nucleic acid sample comprising three or more loci each having at least two different allelic sequences involving three pairs of oligonucleotide probes. Each pair of oligonucleotide probes has a first member and a second member. Each of the members of the pairs is capable of hybridizing in proximity to each other to a segment of the nucleic acid comprising at least one of said three or

Art Unit: 1637

more loci. The first member comprises a FRET donor and the second member comprises a FRET acceptor. The FRET acceptor of the second member of the first oligonucleotide probe pair has a different emission spectrum from the FRET acceptor of the second, and the third oligonucleotide probe pair. When the second and third oligonucleotide probe pairs have the same FRET acceptor, each of the second and third probe pairs has a different T_m from each other for each different allele within the nucleic acid segment to which each member hybridizes. The emission of each of the FRET acceptor is measured at a first temperature. The emission measurements are repeated at a second temperature. The emission of the FRET acceptor at different temperature is an indication of the alleles present at said three or more loci.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. The drawings submitted 4/19/2002 were reviewed (See the attached PTO-948).
